

## Description

Three conductor cable with stranded copper conductors, extruded insulation system consisting of a thermosetting semiconducting conductor shield, high dielectric strength EPROTENAX™ EPR insulation, thermosetting semiconducting insulation shield, helically applied bare copper tape shield, cabled with fillers and grounding conductors, overall binder tape, foamed polymeric layer for superior mechanical protection, longitudinally applied aluminum tape, extruded oil and hydrocarbon resistant polymeric layer, and overall sun resistant PVC jacket. Suitable for Class I Division 2 locations.

## Specifications

## Ratings

<b>ICEA</b>	ICEA S-93-639/NEMA WC74	Type MV-105
<b>UL</b>	UL 1072	For CT USE Direct Buried Sunlight Resistant IEEE 383 Flame Test IEEE 1202 Flame Test CSA Cold Impact/Bend Test (-40C) CSA FT4 Flame Test ICEA T-29-520 at 210,000 BTU/hr
<b>MSHA</b>		Type MP

For 105°C continuous, 140°C emergency, 250°C short-circuit operation.

## Design Parameters

### Conductor

- Class B Compact concentric strand soft drawn annealed copper per ASTM.

### Conductor Shield

- Extruded thermosetting semiconducting shield which is free stripping from the conductor and bonded to the insulation.

### Insulation

- Natural high dielectric strength EPROTENAX™ EPR-based insulation, combined with other materials and agents that enhance the electrical and mechanical characteristics assuring extended cable life.

### Insulation Shield

- Extruded thermosetting semiconducting shield with controlled adhesion to the insulation providing the required balance between electrical integrity and ease of stripping.

### Metallic Shield

- Helically applied non-magnetic copper tape(s) over the insulation shield with a minimum overlap of 15%. A Mylar ribbon is longitudinally applied under the copper tape shield for phase identification - 1C w/ Red, 1C w/ Blue, and 1C w/ Black.

### Grounding Conductors

- Bare stranded copper conductor, one in each interstice, per UL, ICEA, and ASTM.

### Assembly

- Phase identified shielded conductors cabled with fillers and grounding conductors (as specified), forming a firm and cylindrical cable core. A binder tape is applied to maintain core symmetry and mechanical stability.

## Mechanical Protection

- High strength and high crush resistant Air Bag™ Layer extruded over the core assembly

## Chemical Protection

- A layer of Drylam™ which consists of aluminum tape and a chemical resistant extruded polymer layer is applied.

## Jacket

- Sunlight resistant polyvinyl chloride (PVC) jacket.

## Options

- Colored jackets
- Mine Power Type MP-GC
- Low Smoke Zero Halogen Jacket
- Manufactured to CSA
- 100% Insulation Level
- Aluminum Conductors

## Installations

- Conduit in Air
- Direct Buried
- Underground Duct
- Isolated in Air
- In Cable Tray
- Wet Locations
- Dry Locations
- With Messenger
- Industrial

## Applications and Benefits

Prysmian's patented AIRGUARD™ cable is a direct replacement for continuously corrugated and welded aluminum armored cables with 5X the impact performance and 2X-3X the sidewall bearing pressure limit (@ 3000lbs/rad-ft). This enables longer pulls than with CCW type cables. Please call in regards to product literature and performance testing and videos.

†Ampacities are based on the following:

Information Subject to Change without Notice.

**PRODUCT NOTES:**

**Three Phase Operation**

▲ Items are Prysmian authorized stock. The above dimensions are approximate and subject to normal manufacturing tolerances. All metric (SI) dimensions are derived from a soft conversion.

In Duct: Cable in underground electrical ducts; one cable per duct; based on ambient temperature of 20°C; NEC Table 310-79  
Air: Cable isolated in air and an ambient temperature of 40°C; per NEC Table 310-71

In Cable Tray: Per NEC Article 318-13, for multi-conductor cables installed in a single layer in an uncovered cable tray, with maintained spacing of not less than one cable diameter between cables, the ampacities shall not exceed the allowable ampacities stated in Table 310-71 (Copper), "Isolated in Air" values noted above.

‡EPRONEX™ EPR-insulated cables are capable of operating at 105°C. However, the maximum operating temperature of the cable should be based on the maximum operating temperature of the cable accessories to be used.

††Impedance based on 105°C operating temperature, shields short-circuited with no return in earth. At 90°C, the resistive portion of the impedances can be estimated at 96% of the values at 105°C, the reactive portions remain unchanged.
